

Clinical Trial Protocol

Iranian Registry of Clinical Trials

10 Jun 2026

A comparative clinical trial study of the therapeutic effects and side effects of the two drugs Baricitinib and Tofacitinib in pediatric patients with Alopecia Areata

Protocol summary

Study aim

Comparison of the effects of Baricitinib and Tofacitinib in pediatric patients with alopecia areata

Design

After obtaining written consent from the parents, the patients will be randomly divided into 2 groups of 24 people based on the randomization table. The first group will be treated with tofacitinib 5 to 15 mg per day, the second group will be treated with baricitinib 2 to 4 mg per day.

Settings and conduct

After obtaining written consent from the parents, the patients will be randomly divided into 2 groups of 24 people based on the randomization table and the order of entry into the study. The first group will be treated with Tofacitinib 5 to 15 mg per day, the second group will be treated with Baricitinib 2 to 4 mg per day. Clinical and laboratory evaluation intervals will be the first month, the third month, and the sixth month.

Participants/Inclusion and exclusion criteria

This study is a clinical trial and will be conducted on 48 pediatric patients with alopecia areata referred to Razi Hospital under the age of 18. Criteria for entering the study: 1) SALT score above 20% 2) consent of the child's parent and signing the consent form to enter the clinical trial 3) possibility of regular follow-up in the clinic
Exclusion criteria: 1) Existence of underlying systemic diseases 2) Parents' lack of consent to systemic treatment 3) SALT score lower than 20

Intervention groups

This study is a clinical trial and will be conducted on 48 pediatric patients with alopecia areata referred to Razi Hospital under the age of 18. After obtaining written consent from the parents, the patients will be randomly divided into 2 groups of 24 people. The first group will be treated with tofacitinib 5 to 15 mg per day, the second group will be treated with baricitinib 2 to 4 mg per day.

Scientific title
A comparative clinical trial study of the therapeutic effects and side effects of the two drugs Baricitinib and Tofacitinib in pediatric patients with Alopecia Areata

Public title
A comparative clinical trial study of the therapeutic effects and side effects of the two drugs Baricitinib and Tofacitinib in pediatric patients with Alopecia Areata

Purpose
Treatment

Inclusion/Exclusion criteria
Inclusion criteria:
1) SALT score above 20% 2) Consent of the child's parent and signing of the consent form to enter the clinical trial
3) Possibility of regular follow-up in the clinic
Exclusion criteria:
Existence of underlying systemic diseases Parents' lack of satisfaction with systemic treatment SALT score lower than 20

Age
From **2 years** old to **18 years** old

Gender
Both

Phase
N/A

Groups that have been masked
No information

Sample size
Target sample size: **48**

L63

ICD-10 code description

Alopecia areata

Primary outcomes

1

Description

Comparison of the effects of Baricitinib and Tofacitinib in pediatric patients with alopecia areata

Timepoint

The beginning of the study, 1 month later, 3 months later and 6 months later

Method of measurement

According to clinical examination and SALT score

Secondary outcomes

1

Description

Comparison of the effects of baricitinib and tofacitinib in pediatric patients with alopecia areata

Timepoint

The beginning of the study, one month later, three months later and six months later

Method of measurement

Clinical examination and SALT score

Intervention groups

1

Description

Intervention group: children aged 2 to 18 years with alopecia areata receiving tofacitinib

Category

Treatment - Drugs

2

Description

Intervention group: children aged 2 to 18 years with alopecia areata receiving Baricitinib
