The effect of soy milk containing lactobacillus plantarum A7 on inflammatory indices, lipid profile and physical activity in type 2 diabetic patients with nephropathy

Protocol summary

Summary

The current study is a randomized, double-blind, placebo-controlled trial to evaluate the effect of soy milk containing lactobacillus plantarum A7 on inflammatory indices and lipid profile in type 2 diabetic patients with nephropathy. The subjects consist of volunteers with T2DM, who have micro or macro-albuminuria and their GFR is higher than 60 ml/min, they also must not consume any vitamin, mineral or omega-3 supplements 3 weeks before beginning of the trial and during it. Reasons for excluding people from our study are: not adhering to the administrated diet, occurrence of other kidney diseases, cardiac ischemia, gastrointestinal, hepatic or thyroid diseases and acute infections. At the beginning of the study 40 subjects with the abovementioned criteria, will be randomly allocated to the intervention or control groups where they will receive 200 ml/day of soy milk containing L.plantarum or soy milk for 8 weeks. To evaluate the effects of the intervention, serum creatinine, proteinuria, IL-18, serum sialic acid, TNF- α , hsCRP, GFR and lipid profile of the serum will be measured at baseline and after the intervention period and the results will be used to evaluate the probable effectiveness of the intervention to help diabetic patients with nephropathy.

Scientific title

The effect of soy milk containing lactobacillus plantarum A7 on inflammatory indices, lipid profile and physical activity in type 2 diabetic patients with nephropathy

Public title

Effect of probiotic supplementation on diabetic nephropathy

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: Having T2DM ;having micro or macro albuminuria ;GFR higher than 60 ml/min ;not having hepatic gastrointestinal and thyroid diseases ;not having rheumatoid arthritis ;not having any kind of allergy or acute infection ;not consuming vitamin mineral or omega-3 supplements 3 weeks before beginning of the trial and during the trial ;not consuming antibiotics 1 month before the trial and during the trial ;absence of pregnancy or lactating ;not smoking ;not having any specific diet. Exclusion criteria: Not adhering to the administrated diet ;occurrence of other kidney diseases ;cardiac ischemia ;gastrointestinal ;hepatic or thyroid diseases ;acute infection ;needing to be dialysed ;undergoing kidney transplantation ;any kind of surgery or occurrence of pregnancy ;starting to consume drugs that may affect protein excretion such as NSAIDs or ACE-I.

Description of health condition studied

Diabetic nephropathy

ICD-10 code

E11.21

ICD-10 code description

Glomerular disorders in diabetes mellitus

Primary outcomes

1

Description

Serum creatinine

Timepoint

Before the intervention and 2 months after beginning of the intervention

Method of measurement

mg/dl , biochemical analysis

2

Description

Proteinuria

Timepoint

Before the intervention and 2 months after beginning of the intervention

Method of measurement

mg/day, Biochemical analysis

3

Description

IL-18

Timepoint

Before the intervention and 2 months after beginning of the intervention

Method of measurement

pg/ml , ELISA

4

Description

Serum sialic acid

Timepoint

Before the intervention and 2 months after beginning of the intervention

Method of measurement

mmol/l , ELISA

5

Description

TNF- α

Timepoint

Before the intervention and 2 months after beginning of the intervention

Method of measurement

pg/ml , ELISA

6

Description

hsCRP

Timepoint

Before the intervention and 2 months after beginning of the intervention

Method of measurement

mg/dl , ELISA

7

Description

GFR

Timepoint

Before the intervention and 2 months after beginning of the intervention

Method of measurement

ml/min , calculation

8

Description

Serum cholestrol

Timepoint

Before the intervention and 2 months after beginning of the intervention

Method of measurement

mg/dl , biochemical analysis

9

Description

Serum triglyceride

Timepoint

Before the intervention and 2 months after beginning of the intervention

Method of measurement

mg/dl , biochemical analysis

10

Description

Serum LDL-C

Timepoint

Before the intervention and 2 months after beginning of the intervention

Method of measurement

mg/dl , biochemical analysis

11

Description

Serum HDL-C

Timepoint

Before the intervention and 2 months after beginning of the intervention

Method of measurement

mg/dl , biochemical analysis

12

Description

Physical activity

Timepoint

Before the intervention and 2 months after beginning of the intervention

Method of measurement

Met-h/wk , Questionnaire

Secondary outcomes

1

Description

Serum sodium

Timepoint

Before the intervention and 2 months after beginning of the intervention

Method of measurement

mg/dl ,flame photometry

2

Description

Serum potassium

Timepoint

Before the intervention and 2 months after beginning of the intervention

Method of measurement

mg/dl ,flame photometry

3

Description

Fasting blood sugar

Timepoint

Before the intervention and 2 months after beginning of the intervention

Method of measurement

mg/dl , Biochemical analysis

4

Description

Serum genistein

Timepoint

Before the intervention and 2 months after beginning of the intervention

Method of measurement

nmol/l , TR-FIA

Intervention groups

1

Description

Soy milk containing lactobacillus plantarum A7, 200 cc orally, once a day for 2 months

Category

Treatment - Other

2

Description

Soy milk without lactobacillus plantarum A7 , 200 cc

orally, once a day for 2 months
