Comparison of the effectiveness of dry needling and myofascial release methods in improve pain, with hamstring trigger Football Playersin and ultrasonic changes of hamstring muscle functional ability points

Protocol summary

Study aim

Comparing dry needling and myofascial release in improving pain, function, and ultrasonic changes of the hamstring muscle in soccer players with hamstring muscle trigger points.

Design

Clinical trial, with parallel groups, single-blind, randomized

Settings and conduct

Football players, after consenting to participate in the study, pain, functional ability of partnering, distance between finger and toe, functional reach, and hamstring muscle thickness will be measured. For blinding, the evaluator and the therapist are not the same. Finally, participants were block randomly divided into dry needling and myofascial release groups.

Participants/Inclusion and exclusion criteria

Inclusion criteria: males between the ages of 18 - 35, The professional football athletes with hamstring trigger points diagnosed by a physiotherapist using Travell-Simons criteria. Exclusion criteria : history of lower limb fracture or surgery within the past year, presence of any lower limb pathologies like vascular diseases or osteoarthritis, fear of needles, pain score (VAS) between 4-7, recent physiotherapy treatment for the lower limb in the last 6 months, diabetes, lower limb deformities, unwillingness to follow intervention protocol or outcome measures, receiving other treatments for pelvic pain trigger points in the past 4 weeks.

Intervention groups

Dry needling group: In this group, the Deep DN technique will be used with sterile needles on points at the end of the hamstring muscle. Sessions will occur twice a week for 10 minutes each. Myofascial release group: In this group, Myofascial release technique exercises will be performed for two weeks (4 sessions), with each session consisting of a 60-second massage on

the hamstring from the distal to the proximal hamstring area.

Main outcome variables

pain, functional ability of hamstring, finger to floor distance Functional reach, Hamstring strength and thickness

Scientific title
Comparison of the effectiveness of dry needling and myofascial release methods in improve pain, with hamstring trigger Football Playersin and ultrasonic changes of hamstring muscle functional ability points

Public title
dry needling and myofacial release on hamstring trigger point

Purpose
Treatment

Inclusion/Exclusion criteria
Inclusion criteria:
Professional athlete in the field of football Football players with hamstring trigger points whose trigger points have been diagnosed by a physiotherapist using Travell & Simons criteria. Age between 18 -35 years
Exclusion criteria:
A history of fracture and surgery in the lower limb in the last year Presence of any pathology in the lower limbs such as vascular diseases and osteoart hritis Fear of needles Having a pain score (VAS) in the range of 7-10 receiving physiotherapy treatment for the lower limb during the last 6 months Having diabetes Sensitivity to needles The presence of any type of lower limb deformity Athletes who cannot or do not want to comply with the intervention protocol or outcome measures Received any other treatments for joint trigger points or pelvic pain in the past 4 weeks, such as medicine, injection, acupuncture, or physiotherapy Football players who have other neurological or musculoskeletal conditions that may affect the hamstring muscle or hip area, such as lumbar disc herniation, sciatica, piriformis syndrome, or hip disease, and have received physiotherapy treatment for the lower limb in the last 6 months

Age
From **18 years** old to **35 years** old

Gender
Male

Sample size
Target sample size: **44**

Randomization (investigator's opinion)
Randomized

Randomization description
Stratified Permuted Block Randomization will be utilized with 11 blocks of 4 individuals assigned to each group. Group A will receive hamstring needling, while Group B will receive hamstring myofascia release. The order of

interventions A and B within blocks numbered 1 to 11 will be determined by the project's methodological consultant and provided to the project's executive supervisor, who will then assign each qualified participant.

Blinding (investigator's opinion)

Single blinded

Blinding description

The evaluator of the results is not the same as the subject who sampled.

Health conditions studied

1

Description of health condition studied

Trigger points in the hamstring

ICD-10 code

M79.1

ICD-10 code description

Myalgia

Primary outcomes

1

Description

Hamstring functional assessment, Hamstring thickness ultrasonography

Timepoint

Before the treatment and immediately after the treatment

Method of measurement

single leg hamstring bridge test, finger floor distance, functional reach test, ultrasonography

Secondary outcomes

1

Description

pain and strength assessment in hamstring

Timepoint

before and immediately after the treatment

Method of measurement

visual analog scale, dynamometer

Intervention groups

1

Description

Intervention group:En Dry needling group: In this group, the Deep DN technique will be used with sterile needles on points at the end of the hamstring muscle. Sessions will occur twice a week for 10 minutes each. the proximal hamstring area.
