Fish Oil Supplementation vs Knee Strengthening Exercises: A Comparative Study in Knee Osteoarthritis Management

Protocol summary

Study aim
The aim of this study is to evaluate and compare the effects of fish oil supplementation and strengthening exercises on pain relief, joint function, inflammation, and overall quality of life in individuals with osteoarthritis.

Design
Pragmatic, community based, parallel group, double blinded, randomized controlled trial. Total 95 patients will be enrolled. Patients who met our inclusion criteria will be randomized into three groups.

Settings and conduct
Muhammad physical therapy clinic and rehabilitation center, Multan.

Participants/Inclusion and exclusion criteria
Inclusion Criteria: Clinically diagnosed knee OA (Grade II–III, based on the Kellgren-Lawrence scale),moderate pain severity (VAS score 4–6 at baseline),able to perform exercises and follow instructions. Exclusion criteria: Severe OA requiring surgery, allergies to fish oil or vegetarian individuals unwilling to consume fish products, current use of omega-3 supplements or structured physical therapy for OA,significant comorbid conditions (e.g., rheumatoid arthritis, uncontrolled diabetes, cardiovascular diseases).

Intervention groups
Group 1: Fish oil supplementation (1,000 mg fish oil capsule taken twice daily for 12 weeks.) Group 2:Strengthening exercises (Isometric Contractions: Static quadriceps contraction held for 5–10 seconds, repeated 10–15 times per session. Isotonic Strengthening exercise: Partial squats and leg raises with incremental resistance over time) Group 3:Combined intervention (Fish oil + Strengthening exercises)

Main outcome variables
Knee X rays; Western Ontario and McMaster Universities Osteoarthritis Index scale; Numeric Pain Rating Scale; Pain Catastrophizing Scale; Knee Range of Motion (goniometry); Knee injury outcome (KOOS); Muscle strength (dynamometer); Quality of life (SF-36); C-reactive protein; Interleukin-6

Scientific title

Fish Oil Supplementation vs Knee Strengthening Exercises: A Comparative Study in Knee Osteoarthritis Management

Public title

Fish Oil Supplementation vs Knee Strengthening Exercises: Knee Osteoarthritis Management

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Clinically diagnosed knee OA (Grade II–III, based on the Kellgren-Lawrence scale). - - Moderate pain severity Able to perform exercises and follow instructions

Exclusion criteria:

Severe OA requiring surgery Allergies to fish oil or vegetarian individuals unwilling to consume fish products. Current use of omega-3 supplements or structured physical therapy for OA Significant comorbid conditions (e.g., rheumatoid arthritis, uncontrolled diabetes, cardiovascular diseases).

Age

From **40 years** old to **60 years** old

Gender

Both

Phase

1

Groups that have been masked

- Outcome assessor
- Data analyser

Sample size

Target sample size: **95**

Randomization (investigator's opinion)

Randomized

Randomization description

This randomization will be done by computer-generated numbers to ensure fairness. Medications will be given in numbered white boxes, each with a unique medication number. The treatment codes will be kept by the principal investigator.

Blinding (investigator's opinion)

Double blinded

Blinding description

Statistical analyser and outcome assessor will be kept blind so that the result obtained will be without biasness.

Placebo

Health conditions studied

1

Description of health condition studied

Knee osteroarthritis

ICD-10 code

M19.0

ICD-10 code description

Primary osteoarthritis of other joints

Primary outcomes

1

Description

Osteophytes

Timepoint

12 weeks

Method of measurement

Knee Xray

2

Description

Pain, stiffness and ADLs

Timepoint

12 weeks

Method of measurement

NPRS and WOMAC Scale

3

Description

Knee ROM

Timepoint

12 Weeks

Method of measurement

Goniometry

Secondary outcomes

1

Description
Knee injury outcome
Timepoint
12 weeks
Method of measurement
Knee injury outcome score (KOOS)

2

Description
Quality of life
Timepoint
12 weeks
Method of measurement
SF-36

Intervention groups

1

Description
Group A: Fish Oil Supplementation, Dosage: 1,000 mg fish oil capsule taken twice daily for 12 weeks.
Category
Treatment - Drugs

2

Description
Group B: Strengthening Exercises, Supervised physiotherapy sessions three times a week for the first four weeks., Home-based exercises with detailed written and visual instructions for the remaining eight weeks. - Exercise program:Isometric Contractions:Static quadriceps contraction held for 5–10 seconds, repeated 10–15 times per session. Isotonic Strengthening:** Partial squats and leg raises with incremental resistance over time.
Category
Rehabilitation

3

Description
Group C: Combined Intervention, Participants will receive both fish oil supplementation and strengthening exercises as per the respective protocols.
Category
Treatment - Other
