Comparing Patient Satisfaction & Stress Distribution on Mandibular Ridge by Three Posterior Occlusal Scheme in Complete Denture

Protocol summary

Summary

In this randomized clinical trial to compare the patients' satisfaction of complete dentures with different occlusal forms, after simple randomized sampling of 15 participant that will be signed informed consent and their latest teeth was extracted 3 month ago, will be selected. For each participant, it will be made 3 set of complete dentures that are variable in occlusion only. During the study, dissatisfied participants can leave it. In this randomized clinical trial to compare the patients' satisfaction of complete dentures with different occlusal forms, after simple randomized sampling of 15 participant that will be signed informed consent and their latest teeth was extracted 3 month ago, will be selected. For each participant, it will be made 3 set of complete dentures that are variable in occlusion only. During the study, dissatisfied participants can leave it. Each set will be inserted for 1 month in 5 participant randomly. The participants will be examined in two stages, after a day and after a week. At the end of month the questionnaire will be filled out and the pressure under the mandibular denture base will be measured with the pressure sensors in invitro study. Then the second and third denture will be inserted simultaneously.

Scientific title

Comparing Patient Satisfaction & Stress Distribution on Mandibular Ridge by Three Posterior Occlusal Scheme in Complete Denture

Public title

Comparing Patient Satisfaction & Stress Distribution on lower jaw by Three Posterior Teeth Closure Scheme in Complete Denture

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: edentulous patients ; atleast 3 month ago the latest teeth was extracted ; ideal jaw relation ;

signing the informed consent Exclusion criteria:
uncontrolled systemic disease ; mentally problem ;
dissatisfaction for keeping on the study

Age

No age limit

Gender

Both

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: 15

K06.9

ICD-10 code description

Disorder of gingiva and edentulous alveolar ridge,
unspecified

Primary outcomes

1

Description

Patients' Satisfaction

Timepoint

After 1 month

Method of measurement

Questionair

2

Description

Pressure Ditrubution Under Mandibular Denture Bases

Timepoint

After 1 month

Method of measurement

Pressure sensor

Secondary outcomes

1

Description

Pateints' Dissatisfaction

Timepoint

During the Study

Method of measurement

Examination and Questionair

Intervention groups

1

Description

Making a set of complete denture with new Buccalized
Occlusion that is different from current occlusion in my
country. In this type just buccal casps of mandibular
teeth will be connect to the central fossa of maxillary
teeth and lingual casps have not contact.
