Effect of Zinc Supplementation on Serum Testosterone and Plasma Lactate in Cyclist after one Bout of Exhaustive Exercise

Protocol summary

Summary

Objectives: The purpose of this study was to investigate how exhaustion exercise affects testosterone levels and plasma lactates in road cyclists who are supplemented with oral zinc for 4 weeks. **Design, Setting and Conduct:** For this reason, sixteen male road cyclists were selected from the Tehran traffic team and under body composition were divided into two groups; zinc group and control group. Before beginning of research, plasma zinc was assessed. After 4 weeks zinc supplementation (30 mg/d⁻¹), blood samples were collected from each subjects before and after an exhaustive exercise bout. **Inclusion criteria:** Having 3-4 years of exercise experience; the absence of any disease in the past month such as to cold; respiratory infection; Hungarian; and fever; the subjects hadn't ingested any type of sport or vitamin-mineral supplements. **Exclusions criteria:** The consuming of sport or vitamin-mineral supplements; the use of alcohol and caffeine 48 hours before the test; participate in heavy exercise 48 hours before the test;; exposure to disease. **Interventions:** Zinc supplementation and one bout of exhaustive exercise. **Main Outcome Measures Variables:** Free and Total Testosterone, and Plasma Lactate.
