The effect of pelvic floor muscle training with and without biofeedback and electrical stimulation on urinary incontinence and quality of life in postmenopausal women: A clinical trial

Protocol summary

Study aim

Determining the effect of pelvic floor exercises with and without biofeedback and electrical stimulation on urinary incontinence and quality of life in postmenopausal women

Design

A controlled, parallel-group, non-randomized, not blinded clinical trial on 60 postmenopausal women.

Settings and conduct

This is an interventional study with two groups of 30 postmenopausal women aged 45 to 60 years who suffer from urinary incontinence. For the pelvic floor exercises group, the necessary training will be given in the first session and for the electrical stimulation and biofeedback group, in addition to pelvic floor exercises, 8 physiotherapy sessions will be conducted at one-week intervals. The outcome of interest is urinary incontinence and quality of life

Participants/Inclusion and exclusion criteria

Inclusion criteria: Age 45-60 years, one year since the last menstrual period after the onset of natural menopause, not taking urinary incontinence medications, residing in Tabriz city. Exclusion criteria: Mental and motor disability, history of any physical or mental illness that causes urinary incontinence.

Intervention groups

For the pelvic floor exercises group, the necessary training will be given in the first session in a private room, and the researcher will make phone calls to the participants of this group every week for 8 weeks to follow up and provide the necessary training. For the electrical stimulation and biofeedback group, in addition to pelvic floor exercises, 8 physiotherapy sessions will be conducted at one-week intervals, and before each session, the time of the intervention will be reminded.

Main outcome variables

Urinary Incontinence

Health conditions studied

1

Description of health condition studied

Urinary incontinence and quality of life in postmenopausal women

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description

Urinary Incontinence

Timepoint

8 weeks after intervention

Method of measurement

Using of Incontinence Questionnaire-Urinary Incontinence Short Form: ICIQ-UISF

Secondary outcomes

1

Description

Life Quality

Timepoint

8 weeks after intervention

Method of measurement

Using of Incontinence Quality of Life Questionnaire: I-QoL

Intervention groups

1

Description

Intervention group: In addition to pelvic floor exercise training, women in this group (30 postmenopausal women with urinary incontinence) will receive biofeedback and electrical pelvic floor stimulation over 8 sessions, one week apart.
