The effect of eye masks and earplugs on sleep quality of patients with myocardial infarction CCU

Protocol summary

Summary

Sleep disturbance depends on a couple of factors such as noise, light and dark cycle disorder in cardiac care unit (CCU) that can lead to acute coronary syndrome. One of the important factors is environment. Sleep can be improved by reducing physical milieu. Although many studies have been working on sleep disorder there is little focus on removing bothering environmental features. This study was designed to compare the effects of simple and low cost devices such as eye mask and earplugs with each other on reducing the environmental factors and improving sleep in CCU patients. This study is a randomized clinical trial conducted in Afshar Hospital of Yazd in 2014. 90 Patients were randomly divided into three groups: eye mask, earplugs and both eye mask and earplugs users. VAS scale at the beginning and end of stay in ICU will be completed by the researcher.

Scientific title

The effect of eye masks and earplugs on sleep quality of patients with myocardial infarction CCU

Public title

The effect of use of eye masks and earplugs on sleep quality of patients with myocardial infarction in CCU

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion criteria: Minimum age 25 years; Alert and aware of the time and place; Able to respond scale, EF up to 40%. Exclusion criteria: Having chronic sleep disorders; Get sleep medications and intravenous narcotics and general anesthesia in 12 hours before the study; Hearing and vision problems.

Age

From **25 years** old to **90 years** old

Gender

Both

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: 90
