### Comparative study of the effect of Domask Rose essence and citrus aurantium on the severity of the symptoms of premenstrual syndrome in the students of Jahrom University of Medical Sciences

#### Protocol summary

##### Study aim

Determining the effect of Domask Rose and Citrus Aurantium essence on the severity of premenstrual syndrome symptoms in students of Jahrom University of Medical Sciences

##### Design

Clinical trial with two test groups and one control group, with parallel, double-blind, randomized groups, on 80 female students (all female students of operating room, anesthesia, and nursing).

##### Settings and conduct

This quasi-experimental study will be conducted on female students at Jahrom University of Medical Sciences. The Goldberg General Health Questionnaire (GHQ) will be completed to assess the mental health of the samples and the Premenstrual Symptoms Screening Questionnaire to determine the presence of PMS and its severity (for three consecutive menstrual cycles). Participants will be randomly divided into three groups. For the intervention, essential oil of rose and orange blossom in 15 cc bottles will be given to the first intervention group: domask rose essence, to the second intervention group: citrus aurantium essence, and to the third group, placebo sweet almond oil. In this way, during two menstrual cycles from 7 days before menstruation to the third day of menstruation, 5 drops of the contents of the desired bottle will be measured by the bottle's own dropper and complete the premenstrual symptoms screening questionnaire at the end of each menstrual cycle.

##### Participants/Inclusion and exclusion criteria

Willingness to participate in the study and completing the consent form, having premenstrual syndrome, not taking hormonal medications two months before the study.

##### Intervention groups

Intervention groups with Domask Rose and Citrus

Aurantium essence (one group 5 drops of Domask Rose essence and the other group 5 drops of Citrus Aurantium essence) and control group with placebo (5 drops of sweet Almond essence oil)

##### Main outcome variables

Symptoms of premenstrual syndrome

**Scientific title**

Comparative study of the effect of Domask Rose essence and citrus aurantium on the severity of the symptoms of premenstrual syndrome in the students of Jahrom University of Medical Sciences

**Public title**

Studying the effect of Domask Rose essence and citrus aurantium on premenstrual syndrome

**Purpose**

Supportive

**Inclusion/Exclusion criteria**

**Inclusion criteria:**

Willingness to participate in the study  
Completing the informed consent form  
Having premenstrual syndrome based on self-report and questionnaire  
Not taking hormonal medications for at least two months before the study  
No use of any medication to reduce symptoms during menstruation or use of a specific medication such as painkillers by all participants  
Not taking vitamin supplements one month before the start of the intervention  
Absence of underlying physical and mental disorders based on the Goldberg General Health Scale  
Having regular menstruation  
Student dormitory resident

**Exclusion criteria:**

Unwillingness to continue participating in the study  
The occurrence of stressful events during the study and the use of any other medication during the study  
Changes in menstrual cycle intervals and duration based on criteria  
Sensitivity to essences used in the study  
Incomplete completion of questionnaires

**Age**

No age limit

**Gender**

Female

**Phase**

3

**Groups that have been masked**

- Participant
- Care provider
- Investigator
- Outcome assessor

**Sample size**

Target sample size: **80**

**Randomization (investigator's opinion)**

Randomized

**Randomization description**

The sampling method in this study was simple random allocation, in which, based on the list of female students in the operating room, anesthesia, and nursing, using a random number table, the first and second selected numbers from the students class list were placed in the test group, and the third number was placed in the

control group in the same way. Allocation of samples in three groups continued until the number of samples was complete.

**Blinding (investigator's opinion)**

Double blinded

**Blinding description**

The students in the experimental and control groups will be placed in two separate locations. In the first experimental group, a bottle containing 15 cc of 40% Domask Rose essence, from Barij Essential Oil Company, Kashan, will be provided to the experimental group. In the second experimental group, a bottle containing 15 cc of Citrus Aurantium essence, from Barij Essential Oil Company, Kashan, will be provided to the experimental group. For the students in the control group, a bottle containing 15 cc of edible Sweet Almond oil will be provided to them. The bottles containing essence of Domask Rose, Citrus Aurantium, and edible sweet almond are the same shape and none will have a specification label and will be marked with labels A (Domask Rose essence), B (Citrus Aurantium essence), and C (Sweet Almond oil) to differentiate them. Then, all three groups will be given bottle A, bottle B, and the control group will be given bottle C, respectively. Sufficient information will be given to the groups on how to consume the contents of the bottles. In this way, during two menstrual cycles, from 7 days before menstruation to the third day of menstruation, they will measure and drink 5 drops of the contents of the desired bottle by the bottle's own mouthpiece. At the end of each menstrual cycle during the intervention period, they will be asked to complete a premenstrual symptoms screening questionnaire.

## Health conditions studied

### 1

#### Description of health condition studied

Premenstrual syndrome

#### ICD-10 code

N94.3

#### ICD-10 code description

Premenstrual tension syndrome

## Primary outcomes

### 1

#### Description

Screening for premenstrual symptoms

#### Timepoint

Before and after menstruation

#### Method of measurement

PSST questionnaire

## Secondary outcomes

empty

## Intervention groups

### 1

#### Description

Intervention group: Aromatherapy is performed by individuals 1 week before menstruation until the third day of menstruation, twice a day for 5 minutes each time for 2 consecutive cycles, in a quiet place and in a stable and comfortable position, and they take 5 drops of the contents of the bottle with a dropper. For the first group, the dose of Domask rose essence used is 4% and for the second group, citrus aurantium essence is 0.5%.

#### Category

Treatment - Drugs

### 2

#### Description

Control group: Aromatherapy is performed by individuals 1 week before menstruation until the third day of menstruation, twice a day for 5 minutes each time for 2 consecutive cycles, in a quiet place and in a stable and comfortable position, and they take 5 drops of the contents of the bottle with a dropper. Sweet almond oil is used for this group.
