Comparison of the therapeutic effects of using single-dose and twice-daily topiramate for migraine prophylaxis in children aged 5 to 18 years referred to Tehran Children's Medical Center Hospital

Protocol summary

Study aim

Evaluation of the effectiveness of single-dose and twice-daily topiramate in reducing the severity, duration, and frequency of migraine attacks in children referred to Tehran Children's Medical Center Hospital

Design

Randomized controlled clinical trial with parallel groups on 70 patients. Randomization is done using Block Randomization.

Settings and conduct

In Patients referred to the Children's Medical Center in Tehran, demographic findings, assessment of the effectiveness of the drug in prophylaxis, frequency and severity of attacks, duration of migraine attacks, disability due to migraine, and side effects of the drug used will be asked and noted in the patient's clinic file. Symptoms related to the severity, frequency, and duration of headaches will be recorded every 3 months during periodic patient visits.

Participants/Inclusion and exclusion criteria

the inclusion criteria encompassed children aged 5 to 18 years diagnosed with migraine according to the International Classification of Headache Disorders, 3rd edition (ICHD-3), candidates for prophylactic treatment with a minimum of two migraine attacks per month, and informed consent obtained from their parents or legal guardians. Exclusion criteria included the presence of other systemic diseases, use of medications for migraine prevention in the past three months, known hypersensitivity to topiramate, and inability to adhere to regular follow-up assessments.

Intervention groups

بیمار مبتلا به بیماری میگرن در طول ۶ ماه مورد مطالعه قرار ۷۰ میگیرند. این بیماران به صورت تصادفی به دو گروه ۳۵ نفری تقسیم می شوند و برای دسته اول داروی توپیرامات به صورت تک دوز و برای تجویز می (BD) دسته دوم داروی توپیرامات به صورت دو دوز در روز گردد. این بیماران تحت درمان پروفیلاکسی با توپیرامات با دوز ماکزیموم دوز ۱۰۰ میلی گرم در روز قرار خواهند ۲mg/kg/day گرفت.

Main outcome variables

Severity, frequency, duration, and headache-related disability

Scientific title
Comparison of the therapeutic effects of using single-dose and twice-daily topiramate for migraine prophylaxis in children aged 5 to 18 years referred to Tehran Children's Medical Center Hospital

Public title
Single-dose topiramate in migraine prophylaxis
Purpose
Prevention
Inclusion/Exclusion criteria
Inclusion criteria:
The inclusion criteria for the study are children aged 5 to 18 years diagnosed with migraine according to the International Classification of Headache Disorders, 3rd edition (ICHD-3) , candidates for prophylactic treatment who experienced a minimum of two migraine attacks per month , and obtained informed consent from their parents or legal guardians to participate in the study
Exclusion criteria:
Age
From **5 years** old to **18 years** old
Gender
Both

Phase
3
Groups that have been masked
No information
Sample size
Target sample size: **70**
Randomization (investigator's opinion)
Randomized
Randomization description
In this study randomization was employed to randomly assign participants to treatment groups. This method aids in maintaining group balance and controlling confounding variables by dividing participants into homogeneous blocks and randomizing within each block
Blinding (investigator's opinion)
Not blinded
Blinding description
Placebo

G43
ICD-10 code description
Migraine

Primary outcomes

1

Description
Headache frequency, headache severity, headache duration, headache-related disability, side effects
Timepoint
At the beginning of the study, 3 months and 6 months after taking the medication
Method of measurement
History, Verbal Pain Scale, Visual Analogue Scale, Pediatric Migraine Disability Assessment (PedMIDAS)

Secondary outcomes

empty

Intervention groups

1

Description
Intervention group: In the present study the calculated therapeutic dose of topiramate for pediatric patients was based on guidelines from the American Academy of Neurology (AAN) and the American Headache Society (AHS), which recommend a dose of 2 mg/kg/day with a maximum of 100 mg/day. Topiramate was initiated at a dose of 1 mg/kg/day for participants and, if necessary, titrated according to a predefined schedule to reach the

optimal dose.
