

Clinical Trial Protocol

Iranian Registry of Clinical Trials

16 Sep 2026

Clinical evaluation of the effect of fluoride-releasing elastomeric chains on the number of Streptococcus mutans in orthodontic patients.

Protocol summary

Summary

Despite the health advantages of orthodontics on the oral and dental health, the presence of orthodontic brackets creates obstacle for patients such as increased accumulation of bacterial plaques. During fixed-treatment the absolute number of salivary Streptococcus mutans, as well as the percentage of Streptococcus mutans were increased which leads to increased occurrence of demineralized lesions and dental caries. The purpose of present study was to evaluate the efficacy of fluoride-releasing elastomeric chains in the control of Streptococcus mutans level in the saliva and surrounding the orthodontic appliances plaque. Sixty patients, who would undergoing fixed-orthodontic appliance treatment would selected and randomly divided into 2 groups of 30. patients must would in overall health situation and do not have any systemic disease In group 1 fluoride-release elastomeric chains would used and conventional elastomeric chains used in group 2. Saliva would collected On days initial, 7, 14, 28, from both groups, and bacterial plaques sample would collected on days initial, 28. At day 28, the fluoride-release and conventional elastomeric chains would removed. All samples would transferred for microbial culture in order to counting the Streptococcus mutans colonies.

Scientific title

Clinical evaluation of the effect of fluoride-releasing elastomeric chains on the number of Streptococcus mutans in orthodontic patients.

Public title

Clinical evaluation of the effect of fluoride-releasing elastomeric chains on the number of Streptococcus mutans in orthodontic patients.

Purpose

Prevention

Inclusion/Exclusion criteria
The inclusion criteria are: 18-28 years old; teeth with normal size; are in overall health situation; do not use antibiotics within the previous 2 weeks. Exclusion criteria: lack of above criteria

Age
From **18 years** old to **28 years** old

Gender
Both

Phase
N/A

Groups that have been masked
No information

Sample size
Target sample size: **60**

Randomization (investigator's opinion)
Randomized

Randomization description

Blinding (investigator's opinion)
Single blinded

Blinding description

Placebo
Used

Assignment
Parallel

Health conditions studied

1

Description of health condition studied
Dental caries

ICD-10 code
R19.8

ICD-10 code description

Other specified symptoms and signs involving the digestive system and abdomen

Primary outcomes

1

Description
Streptococcus mutans bacteria

Timepoint
on days 0; 7; 14; 28

Method of measurement
counting number of Streptococcus mutans colonies

Secondary outcomes

empty

Intervention groups

1

Description
study group: fluoride releasing elastomeric chains would be used

Category
Prevention

2

Description
control group: conventional elastomeric chains used

Category
Prevention
