Iranian Registry of Clinical Trials

11 Sep 2026

The effect of 8 weeks of age-specific sport program on some predictive indicators of lower limb injury and performance of taekwondo girls aged 9 to 12 years

Protocol summary

Study aim

- The aim of this study is to investigate an age-specific training program on some predictive indicators of lower limb injury and performance in girl taekwondo athletes aged 9 to 12 years.

Design

A clinical trial with the control group, with parallel groups, randomized

Settings and conduct

30 female taekwondo athletes will be randomly assigned to two groups, control and experimental, according to the inclusion and exclusion criteria. Before the intervention begins, tests of Functional and injury prediction tests will be taken from the subjects. The intervention will begin two days after the tests are completed. The intervention includes agility, balance, flexibility, plyometric, and strengthening exercises. Before each exercise, the examiner will first explain the correct execution method to the participants. All measurements and training will be done at the Taekwondo gym and on the tatami.

Participants/Inclusion and exclusion criteria

inclusion criteria: Taekwondo girls aged 9 to 12 who have at least one year of sports experience in this field and at least they have a yellow belt. Exclusion criteria : Having an injury in the lower extremities or a history of injury in the past year , having abnormalities in the lower extremities, a history of knee and ankle ligament surgery , fractures of the lumbar-pelvic region and lower limb, a history of neurological and systemic diseases

Intervention groups

The intervention group will participate in an age-specific exercise program for 8 weeks with three 15-minute sessions per week, while the control group will not receive any intervention. The intervention will be applied in the form of exercises and will include agility, balance, flexibility, plyometric, and strengthening exercises.

Main outcome variables

Agility, performance speed, anaerobic power, dynamic balance, lumbar and pelvic range of motion

Scientific title
The effect of 8 weeks of age-specific sport program on some predictive indicators of lower limb injury and performance of taekwondo girls aged 9 to 12 years

Public title
The effect of the age-specific program on the predictive indicators of lower limb injury and performance of taekwondo girls.

Purpose
Prevention

Inclusion/Exclusion criteria
Inclusion criteria:
 Age range: 9 to 12 years old Having at least a yellow belt
 Gender: Girl Having at least 1 year of experience in Taekwondo
Exclusion criteria:
 Having an injury in the lower extremities or a history of injury in the past year that has caused the person to stop exercising for a week. Having a clear abnormality in the lower limbs and trunk according to the New York criteria History of knee and ankle ligament surgery or fractures of the lumbar, pelvic, and lower limb areas History of neurological and systemic disease Body pain that worsens with exercise

Age
From **9 years** old to **12 years** old

Gender
Female

Phase

Groups that have been masked
No information

Sample size
Target sample size: **30**

Randomization (investigator's opinion)
Randomized

Randomization description
Randomization will be done as simple method with card. The type of intervention will be put in sealed envelopes (15 cards for each group). Individuals are listed in order of attendance. After including in the study, the envelopes will be shuffled and each person is asked to select an envelope. The subjects will be asked to select one envelope. According to the predicted sample size, the number of envelopes will be provided. Therefore, any selected envelope will not be reused for randomization sequence. This type of randomization can result in having the same number of individuals in both groups

Blinding (investigator's opinion)
Not blinded

Intervention groups

1

Description

Intervention group: In this group, participants will participate in a special training program in the form of one warm-up for eight weeks. This training program will be done 3 sessions per week. These exercises include agility, balance, flexibility, plyometric and strengthening exercises and are designed according to the level and age of the athletes. These exercises will be performed with available tools such as sports cones, balls and body weight. Each training session will last 15 minutes and will take place in the Taekwondo gym and on tatami. The duration of the intervention will be 24 sessions in an eight-week period.

Category

Prevention

2

Description

Control group: This group will not receive any exercises from the assessor and will continue their daily routine activities.
