

Clinical Trial Protocol

Iranian Registry of Clinical Trials

05 Jul 2026

A comparison of the effects and complications of transforaminal Triamcinolone and Ketorolac in radicular low back pain.

Protocol summary

Summary

Objectives: Chronic radicular Low Back Pain is One of The Most Common Cause of Pain Clinic Admission Which is treated with Epidural Transforaminal Steroid Injection. Due to Steroid Injection Side Effects, We Decided to Compare Ketorolac Effect in This Study. Study design (study participation - sample size), Exclusion and inclusion criteria: Sample size is 30 patients. Patients with chronic low back pain which fulfill study criteria, randomly assigned into two groups by block randomization. The study will be done double - blinded. Intervention: Patients under local anesthesia and fluoroscopic guidance in operative room, transforaminal epidural block will be done. In group 1, Ropivacaine 0.2%, 3cc with Triamcinolone 20 mg and in group 2, Ropivacaine 0.2% ,3cc with Ketorolac 30 mg will be injected. Visual analog scale, ODI, analgesic need, SLR (straight leg raise) will be checked as follow: before injection, 2 weeks later first, 3 and 6 month later. FBS will be checked and Recorded as follow: before injection, 2 weeks later and first month later. Ca, Mg, Vit.C and Vit.D will be checked and Recorded as follow: before and 1 month later. The results will be analyzed and compared

Scientific title

A comparison of the effects and complications of transforaminal Triamcinolone and Ketorolac in radicular low back pain.

Public title

A comparison of the effects and complications of transforaminal Triamcinolone and Ketorolac in radicular low back pain.

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: Age 20-70 years; Pain that has not responded to treatment for at least 6 weeks; Evidence of

Nerve root involvement as disc bulging and/or foraminal stenosis in CT/MRI; VAS > 4; ASA class I, II; Patients' Informed consent; Exclusion criteria: Patients with coagulopathy; Infection in injection site as Herpetic diseases; Anatomical and congenital spine deformity as severe scoliosis; Surgical history instrument insertion; Psychological severe disorders; History of harmful reaction to local anesthetic and steroid; Patients with motor deficit or progressive neural defect; Cancer; Neural foramen radiological access difficulty; Substance abuse; HIV; Acute trauma; Cauda Equina syndrome; More than 3 level abnormalities; Absence of radicular pain;

Age

From **20 years** old to **70 years** old

Gender

Health conditions studied

1

Description of health condition studied

chronic low back pain

ICD-10 code

G54.8

ICD-10 code description

low back pain

Primary outcomes

1

Description

low back pain

Timepoint

Before injection, two weeks, 1, 3 and 6 month after intervention

Method of measurement

pain score measured with visual analogue scale in Questionnaire.

Secondary outcomes

1

Description

Oswestry Disability Index questionnaire (ODI) and straight leg raising test (SLR), complications

Timepoint

Before injection, two weeks, 1, 3 and 6 month after intervention.

Method of measurement

Questionnaire

Intervention groups

1

Description

In intervention group 3 ml 0.2% Ropivacaine (Ropivacaina Molteni, Molteni, Italy) plus 30 mg Ketorolac (Toradol, Zahravi, Iran) was injected in the selected level by a curved blunt tip 10 cm needle (Cosman, USA) under fluoroscopic guidance via transforaminal epidural approach.

Category

Treatment - Drugs

2

Description

In control group 3 ml 0.2% Ropivacaine (Ropivacaina Molteni, Molteni, Italy) plus 20 mg Triamcinolone (Triamcinolone acetate, EXIR, IRAN) was injected in the selected level by a curved blunt tip 10 cm needle (Cosman, USA) under fluoroscopic guidance via transforaminal epidural approach.

Category

Treatment - Drugs
