

Clinical Trial Protocol

Iranian Registry of Clinical Trials

14 Jul 2026

The impact of subcutaneous infiltration of 0.5% bupivacaïen on the c-reactive protein titer and hemodynamic parameters after craniotomy

Protocol summary

Summary

Patients who were schedule for elective craniotomy for intracranial tumors surgeries and aged between 18 to 65 yr enrolled in this study. Patients who had history of head trauma, previous craniotomy, documented allergy to bupivacaine and uncontrolled hypertension were excluded from the study. Patients were enrolled to receive either 20 ml of 0.25% bopivacaine(intervention group) or 20 ml of 0.9% normal saline(control group). Before the induction of general anesthesia, standard monitoring consisted of electrocardiography, heart rate, pulse oximetry, systolic BP, diastolic BP, and mean arterial pressure (MAP) were performed. An arterial catheter was inserted into right radial artery for BP monitoring and blood sampling.

Scientific title

The impact of subcutaneous infiltration of 0.5% bupivacaïen on the c-reactive protein titer and hemodynamic parameters after craniotomy

Public title

The impact of subcutaneous infiltration of 0.5% bupivacaïen on the c-reactive protein titer and hemodynamic parameters after craniotomy

Purpose

Diagnostic

Inclusion/Exclusion criteria

Inclusion criteria:being candidate for craniotomy and age between18 to 65 years. Exclusion criteria: need for emergency surgery ; previous craniotomy and Diabetes Melitus

Age

From **18 years** old to **65 years** old

Gender

Both

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: 40

Randomization (investigator's opinion)
