The effect of exercise and nutrition educational program on severity of fatigue in adolescents' cancer patients undergoing chemotherapy

Protocol summary

Registration timing: **registered_while_recruiting**

Summary

1)Objective: To determine the effect of training exercise and nutrition on the severity of fatigue caused by cancer in adolescents who are undergoing chemotherapy in the oncology department of Amir hospital in shiraz , Iran between2015/16. 2)Design: This randomized clinical trial is not blind. 3) Methodology: 110 adolescents' patients between the age of 10 to 18 years are eligible for inclusion in this study and are randomly divided into groups of control and test. The control group filled out a questionnaire before the study about fatigue, but does not receive any training. In the test group they filled out a questionnaire before the study on the subject of fatigue but they received 6 weeks of training and diet. They are told to exercise at home for 20 minutes daily. A week after the end of training both groups filled out the questionnaire of fatigue once again. 4) Study samples : the study samples includes cancer patients who are undergoing chemotherapy. The main condition for entry and withdrawal of participants are; The main criteria for inclusion: Age between 10 to 18 years of age, at least a month has passed from the onset of diagnosis, have not history of heart disease, diabetes, underlying or congenital disease; The main exclusion criteria: lack of desire to continue cooperation, patients who have an amputee, patients who are neurologically impaired due to disease or treatment complications. 5) Intervention: in both groups before the study they completed a questionnaire and the test group is given exercise and nutrition training for six weeks, both groups filled out the questionnaire and fatigue severity is checked. 6) The main outcomes: Fatigue severity caused by cancer.
