

Clinical Trial Protocol

Iranian Registry of Clinical Trials

27 Jul 2026

Investigating the effectiveness of cognitive behavioral therapy in reducing internet addiction, sleep quality, and mental health among students of Islamic Azad University of Ahvaz Branch.

Protocol summary

Study aim

Determining the effectiveness of cognitive behavioral therapy in reducing internet addiction, sleep quality, and mental health

Design

This study is designed as a randomized clinical trial with two parallel groups (15 participants). The experimental group will receive a structured CBT intervention, the control group will receive no intervention. Participant allocation will be done by block randomization (block size 4) and through sealed envelopes.

Settings and conduct

This study is a clinical trial conducted on students of Ahvaz Azad University. The samples are randomly divided into two intervention groups (receiving CBT) and control, and data are collected with standard questionnaires. The outcome assessor is blinded to the grouping of the samples to avoid bias.

Participants/Inclusion and exclusion criteria

Entry requirements: Be Iranian and resident of Ahvaz city, be a student, have a smartphone, have at least one year of creating an account on social networks such as Instagram, etc., age 18 to 25 years. Exclusion criteria: Be under psychiatric treatment due to mental health problems, be addicted to drugs, psychotropic drugs, alcohol, or abuse medication.

Intervention groups

Intervention group (experiment): This group will receive a cognitive-behavioral therapy (CBT) intervention protocol specifically designed to reduce Internet addiction. The intervention will consist of structured sessions (e.g., 8 to 10 weekly 90-minute sessions) that cover topics such as time management, identifying cognitive distortions, improving communication skills, and emotion regulation. Control group: This group will not receive any active intervention during the study period.

Main outcome variables

Internet addiction, sleep quality, mental health

Scientific title
Investigating the effectiveness of cognitive behavioral therapy in reducing internet addiction, sleep quality, and mental health among students of Islamic Azad University of Ahvaz Branch.

Public title
Cognitive behavioral therapy in reducing internet addiction, sleep quality, and mental health

Purpose
Education/Guidance

Inclusion/Exclusion criteria
Inclusion criteria:
 Be Iranian and a resident of Ahvaz city Be a student Have a smartphone Have at least one year of creating an account on social networks such as Instagram, etc. Be between 18 and 25 years of age.
Exclusion criteria:
 Addiction to narcotics, psychotropic substances, alcohol, or medication abuse Are under psychiatric treatment due to mental health problems

Age
From **18 years** old to **25 years** old

Gender
Both

Phase
N/A

Groups that have been masked

- Outcome assessor
- Data analyser

Sample size
Target sample size: **30**

Randomization (investigator's opinion)
Randomized

Randomization description
This study used a block randomization method with a block size of 4. The sequence of group allocation (experimental/control) was generated using Excel software and protected in sealed envelopes. After screening and obtaining consent, participants were assigned to groups based on the order of arrival and opening of the envelopes.

Blinding (investigator's opinion)
Single blinded

Blinding description
In this study, due to the non-blinded nature of the intervention (cognitive-behavioral therapy), only the Outcome Assessor and Data Analyst will be blinded. After random assignment of participants to the experimental and control groups, the assessor, who is responsible for collecting post-test and follow-up data, will not be aware of the purpose of the study and the type of group assignment of the participants. The data will be provided to him/her in coded form (without group identifiers). Also, the data analyst will perform statistical analysis without knowing the grouping of the samples to avoid any bias.

Health conditions studied

1

Description of health condition studied
Internet addiction

ICD-10 code
F51.9

ICD-10 code description
Sleep disorder not due to a substance or known physiological condition, unspecified

Primary outcomes

1

Description
Internet addiction

Timepoint
Pretest (before the intervention), posttest (immediately after the intervention), and follow-up (at least 2 months after the intervention).

Method of measurement
Young's Internet Addiction Questionnaire

Secondary outcomes

1

Description
Sleep quality

Timepoint

Pre-test (before the intervention), post-test (immediately after the completion of the 8-week intervention), and follow-up (2 months after the completion of the intervention).

Method of measurement

Pittsburgh Standardized Sleep Quality Questionnaire

2

Description

Mental health

Timepoint

Pre-test (before the intervention), post-test (immediately after the completion of the 8-week intervention), and follow-up (2 months after the completion of the intervention).

Method of measurement

Standardized General Health Questionnaire

Intervention groups

1

Description

Intervention group: 15 eligible students will receive a structured cognitive-behavioral therapy (CBT) protocol. The intervention will consist of 8 90-minute sessions (one session per week) with educational content and practical exercises to manage internet addiction, improve sleep quality, and improve mental health.

Category

N/A

2

Description

Control group: Fifteen eligible students who do not receive any active intervention and will only be assessed at pre-test, post-test, and follow-up will be included. In order to comply with ethical considerations, if the intervention is effective, similar training will be provided to this group after the study is completed.
