Clinical comparison of three bonding technique in restoration of Non carious cervical lesion

Protocol summary

Summary

The objective of this randomized, double blind trial is to investigate the effect of three bonding technique on the restoration of Non caries cervical lesion (NCCL) in teeth. In this study 12 patients with 3 NCCL in their teeth who meet the inclusion/exclusion criteria will be recruited and randomly any NCCL in one patient restored with Optibond FL or Clearfil SE bond or Ethanol wet bonding. Retention rate, marginal discoloration, Secondary caries, Post operative sensitivity, marginal defect, tooth vitality will be measured in the baseline and 6-month recall and compared between groups,

Scientific title

Clinical comparison of three bonding technique in restoration of Non carious cervical lesion

Public title

Evaluation of ethanol wet bonding

Purpose

Treatment

Inclusion/Exclusion criteria

The patients with good general health and good oral condition used to this study. But patients with active, untreated periodontal disease, uncontrolled carious, xerostomia, orthodontic appliance, denture and/or bleaching or Florid therapy pregnancy patient eliminate from this research

Age

From **30 years** old to **50 years** old

Gender

Both

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: **36**

Health conditions studied

1

Description of health condition studied

Non carious cervical lesion
ICD-10 code
K03
ICD-10 code description
Other diseases of hard tissues of teeth

Primary outcomes

1

Description

restoration retention, tooth vitality, post - operative sensitivity, caries occurrence , marginal discoloration, enamel and dentin marginal integrity
Timepoint
24 hours and 6 months
Method of measurement
Restoration retention: Lost or No, Enamel and dentin marginal defect: using a sharp probe and a mirror. Marginal discoloration: to be or not to be of discoloration in margin. Caries occurrence: observation, Post-operative sensitivity: by blowing a stream of air for 3 sec at distance of 2 to 3 mm while shielding the adjacent teeth with finger, Vitality: by holding a cold carbon dioxide ice stick to the tooth

Secondary outcomes

empty

Intervention groups

1

Description

1- clearfil SEbond with manufacture structure 2- optibond FL with manufacture structure 3- ethanol wet bonding technique, after acid etching and rinsing the surface was treated with 2drops of 100% ethanol followed by a 10 sec waiting period. The surface was then gently air dried for 5 sec before applying another 2 drop of 100% ethanol and waiting another 10 sec. excess ethanol was removed from the surface with absorbent paper and applying hydrophob resin of optibondFL.
