Effect of Matrica oral rinse on incidence of Ventilator-Associated Pneumonia in hospitalized patient in critical care unitpatients

Protocol summary

Summary

The aim of this study is to determine effect of Matrica versus chlorhexidine oral rinse on incidence of ventilator-associated pneumonia in hospitalized patient in critical care unit. Inclusion criteria include more than 18 years old, under mechanical ventilation for more than 48 hours, no pneumonia, lack of oral trauma, no immunosuppressive diseases. Exclusion criteria: if a patient separated from mechanical ventilation for less than 48 hours. Sample size: Study conducted on 30 subjects from each group using a significance level of 5% and the 90% formula, samples in each group calculated. Intervention in both groups is the same and randomize. Patients of experimental and control groups receive daily twice Matrica oral rinse and Chlorhexidine 0.2% oral rinse, respectively. Patients are mouthwash for 7 days and ventilator-associated pneumonia assessed in 7th days by Clinical Pulmonary Infection Score.

Description of health condition studied

Pneumonia

ICD-10 code

J17

ICD-10 code description

Pneumonia in diseases classified elsewhere

Primary outcomes

1

Description

Ventilator Associated Pneumonia(VAP)

Timepoint

Before the study and one week after the study

Method of measurement

CPIIS index

Secondary outcomes

empty

Intervention groups

1

Description

Intervention Group: While the head of the bed is elevated, Mouthwash is done by a long-handled brush and one tablespoon of Matrica in a glass of diluted solution serum. Mouthwash is done about 10 minutes twice a day for one week. Also pharyngeal suctioning is done before and after mouthwash. After one week, Occurrence or non-occurrence of Ventilator-associated pneumonia assess by CPIIS score as the primary outcome variable.

Category

Other

2

Description

Control group: in this group, mouthwash is done by a long-handled brush and chlorhexidine 0.2%. Duration of mouth care is one week. After one week, the occurrence of Ventilator-associated pneumonia evaluate by CPIIS.
