Comparing the effect of group motivational interviewing with multimedia training on the elderly life style

Protocol summary

Summary

The aim of this study was to compare the effect of group motivational interviewing and multi-media training on the Tehran elderly lifestyle. This three group pre and post clinical trial study was conducted on elderly members of nursing homes in the Tehran municipal districts. In the first phase, in a cross-sectional-descriptive study, Tehran Municipality districts were divided into five categories based on geographical situation by using stratified random sampling. Then a municipal district was randomly selected from each category. Finally one of the elderly nursing homes was selected from each district and was studied 400 members lifestyles aged over 55 years old. Data were collected by using healthy lifestyle questionnaire in Iranian elderly designed by Babak et al (2008). In the second phase, 90 subjects were randomly divided in three groups with moderate or poor lifestyle score and without specific chronic diseases. The first group (n = 30) received 5 sessions of motivational interviewing; the second group (n = 30) multimedia training of healthy lifestyle in old age and the third group (n = 30) did not receive any training as a control group. After 3 months, the healthy lifestyle questionnaire in Iranian elderly was again presented to the three groups and the lifestyles of subjects were studied and analyzed.
