Effect of synbiotic on severity uremic pruritus and muscle cramps in patients undergoing hemodialysis

Protocol summary

Study aim
To determine the effect of synbiotics on the severity of uremic pruritus and muscle cramps in patients undergoing hemodialysis

Design
Clinical Trial, by using block randomization, the Patients enter an intervention or control group, A pilot study including 30 patients from each group, will determine the size of the sample, Parallel groups, triple-blind.

Settings and conduct
This study is being conducted in the hemodialysis ward of Kowsar Hospital, Semnan. The medication is provided to the patient by the head nurse. In this way, the patient, researcher, and data analyst are not aware of the type of intervention and do not know who is in which group.

Participants/Inclusion and exclusion criteria
Consent and interest in participating, in the study Age 18 - 65 years old, Hemodialysis treatment at least twice a week for a maximum of four hours each time, Undergoing hemodialysis treatment for at least six months, Presence of uremic pruritus as diagnosed by a doctor for at least six months and obtaining a score of at least mild on the YOSIPOVITCH questionnaire, Experiencing muscle cramps at least once a week, Life expectancy and survival for at least three months

Intervention groups
The intervention group will consume two synbiotic capsules with the brand name Lactocare (500 mg) daily, one after lunch and the other after dinner, for eight weeks.

Main outcome variables
uremic pruritus severity

Scientific title
Effect of synbiotic on severity uremic pruritus and muscle cramps in patients undergoing hemodialysis

Public title
Effect of synbiotic on severity uremic pruritus and muscle cramps in patients undergoing hemodialysis

Purpose
Supportive
Inclusion/Exclusion criteria
Inclusion criteria:
Consent and interest in participating in the study Age 18 - 65 years old Hemodialysis treatment at least twice a week for a maximum of four hours each time Undergoing hemodialysis treatment for at least six months Presence of uremic pruritus as diagnosed by a doctor for at least six months and obtaining a score of at least mild on the YOSIPOVITCH questionnaire Experiencing muscle cramps at least once a week Life expectancy and survival for at least three months
Exclusion criteria:
Kidney and organ transplant candidates Consuming synbiotics, probiotics, prebiotics, or antibiotics four weeks before participating in the study Having a severe infection within four weeks before study participation Chronic liver disease (hepatitis B, hepatitis C), pulmonary, cardiovascular, acute pancreatitis, gastrointestinal disorders (inflammatory bowel disease, ulcerative colitis, Crohn's, celiac disease, lactose intolerance or allergy, irritable bowel syndrome), active cancers, immunodeficiency, HIV
Age
From **18 years** old to **65 years** old
Gender
Both

Phase
N/A
Groups that have been masked

- Participant
- Investigator
- Data analyser

Sample size
Target sample size: **30**
Randomization (investigator's opinion)
Randomized
Randomization description
The research sample was assigned to the study groups by permuted groups. After randomly selecting one of the two possible blocks, two consecutive samples are randomly placed in the intervention or control group. Blocking is used within gender and age. Regarding age, the first patient is randomly placed in the intervention or control group, and the next patient with a maximum age difference of five years is placed in another group. If the next patient's age difference is more than five years, the patient is randomly placed in another age block. Regarding gender, randomization is done separately for men and women. In other words, the first female patient is randomly placed in the intervention or control group and the next female patient is placed in another group, for the male patient's division is done in the same way.
Blinding (investigator's opinion)
Triple blinded
Blinding description
The blinding of the drug is provided to the patient by the head nurse. In this way, the patient, the researcher, and the data analyst in the study did not know about the intervention type and did not know who was in which group.
Placebo

Health conditions studied

1

Description of health condition studied
Hemodialysis
ICD-10 code
N18
ICD-10 code description
Chronic kidney disease (CKD)

Primary outcomes

1

Description
Uremic pruritus severity
Timepoint
The severity of uremic pruritus will be measured before and after the intervention.
Method of measurement
YOSIPOVITCH Itch Questionnaire

Secondary outcomes

1

Description
Muscle cramps
Timepoint
Muscle cramps will be measured before and after the intervention.
Method of measurement
Visual analog scale

Intervention groups

1

Description
Intervention group: The intervention group will consume two synbiotic capsules with the brand name Lactocare (500 mg) daily, one after lunch and the other after dinner, for eight weeks.
Category
Treatment - Other

2

Description
Control group: The control group will consume two placebo capsules (containing 500 mg of cornstarch) daily, one after lunch and one after dinner, for eight weeks.
Category
Placebo
