A comparison between sequential therapy versus standard quadruple therapy for *Helicobacter pylori* eradication in patients attended to firoozgar and rasul hospitals

Protocol summary

Summary

Due to the progressive decline in the usefulness of traditional diets, new approaches to treatment of *H.pylori* has been proposed. A promising approach is the sequential regimen (sequential). Side two treatment regimens. The main objectives of the project: the sequential regimen and standard four drug regimen will be compared in *Helicobacter pylori* eradication. Randomly divided into two groups of patients. For one of two groups of quadruple therapy and sequential therapy for other begins. 4 drug regimen consisting of omeprazole, amoxicillin, clarithromycin, is bismuth. Sequential regimen consisting of two stages. Step 1: 7 days of treatment with omeprazole + amoxicillin. Step 2: 7 days omeprazole + clarithromycin + Fvrazvlydn 8 weeks after treatment for eradication UBT test is called and then the two groups are compared. Exclusion criteria for the study of allergy to antibiotics. The total sample size of $n = 160$

Health conditions studied**1****Description of health condition studied**

Indigestion

ICD-10 code

K30

ICD-10 code description

Dyspepsia

Primary outcomes**1****Description**

Response to treatment

Timepoint

8 weeks after treatment.

Method of measurement

UBT test

Secondary outcomes**1****Description**

Intensity and pattern of gastritis

Timepoint

Before treatment

Method of measurement

Observed on endoscopy

2**Description**

Smoking

Timepoint

Baseline

Method of measurement

Pack /year, The question of the individual

3**Description**

Body mass index

Timepoint

Baseline

Method of measurement

Kg/m2, With scales and meters

Intervention groups**1****Description**

patients randomly divided into two groups . quadruple therapy for control group was began. 4 drug regimen consisting of omeprazole (20mg BID), amoxicillin 1gr BID)), clarithromycin (500mg BID), is bismuth.
