### Celecoxib as adjuvant therapy in the treatment of OCD: a double blind randomized trial

#### Protocol summary

##### Summary

The objective of this randomized, double-blind, placebo controlled study is to test the hypothesis that the addition of Celecoxib would improve psychopathology in subjects with OCD treated with fluvoxamine. 50 patients with chronic DSM-IV-diagnosed OCD will receive fluvoxamine(100 mg/day) combined with either placebo (N=25) or 400mg/day celecoxib(N=25) for 10 weeks. Efficacy will be defined as the change from baseline to endpoint in score on the Yale-Brown obsessive compulsive scale(Y-B ocs).
