Comparison of marital satisfaction, confidence and personality characteristics before and after Bariatric laparoscopic surgery in morbid obese patients in Hazrat-e- Rasool Hospital in 1391

Protocol summary

Summary

The purpose of this study is to compare Personality trait, marital satisfaction and self confidence before and after bariatric surgery in morbid obese patients in Rasool-e-Akram hospital in 1391. This Study is performed on morbid obese patients with BMI over 40 or BMI over 35 with one obese comorbidity, who will undergo bariatric surgery and the patients with inability to complete the questionnaire for any reasons are excluded. The morbid obese patients who are candidates for bariatric surgery in obesity clinic of Rasool-e-Akram hospital in 1391 are studied and the sample size is 68. In cases by using the Neo test assays Personality trait, with Cooper Smith test assays Self confidence, Marital satisfaction is checked by using the Enrich test. The patients will undergo bariatric surgery for a uniform method and after six months these factors will be checked by using above tests.
