Evaluation of the effect of propranolol on bleeding from the stapler line during bariatric laparoscopic surgery in morbid obese patients

Protocol summary

Summary

The aim of this study was to evaluate the effect of oral Inderal reduce bleeding during laparoscopic gastric bypass is. Our study will be done completely randomized, double-blind, multicenter. the study population are patients with severe obesity that have indication for laparoscopic gastric bypass surgery (Patients with BMI over 35 with associated complication or with a BMI over 40).the patient with inderal contraindication or any reason their operation will be converted to open surgery is excluded. The sample size for this study is 82 patients that the patients randomly divided into two equal groups are the case group of 40 mg twice a day for one week before surgery to receive either a control group who received a placebo the same way as. The number of bleeding points requiring cautery during surgery by the surgeon measured In stapler lines and recorded then the end of study The outcome of the case and control group are compared.
