Problem-solving training on resilience and reducing risky behaviors in students

Protocol summary

Study aim
Investigating the effect of problem-solving training on resilience and reducing risky behaviors in junior high school students in Rask city

Design
The statistical population of this study includes all female students in junior high school (grades 7, 8, and 9) of public and private schools in Rask County in the academic year 1404-1405. Using cluster random sampling, 30 female adolescents are selected in two groups of 15 (experimental and control). The sampling in this study is of cluster random type. First, from among all female schools in junior high school (grades 7, 8, and 9) in Rask County, 3 schools are randomly selected. Then, from each school, one or two classes from grades 7 to 9 are randomly selected as the final clusters. From among the students in these classes, 30 people who meet the entry criteria are purposefully selected and randomly divided into two experimental and control groups (15 people each).

Settings and conduct
After final approval of the proposal and obtaining the necessary permits from the Zahak County Education Department, the researcher will visit the selected schools.

Participants/Inclusion and exclusion criteria
The inclusion criteria for the study included female high school students (ages 12-15) in schools in the city of Rask, no history of severe mental disorders (based on parent or school counselor report), and written consent from the parents and the student.

Intervention groups
First, from among all the girls' junior high schools (grades 7, 8, and 9) in Rask County, 3 schools are randomly selected. Then, from each school, one or two classes from grades 7 to 9 are randomly selected as the final clusters. From among the students in these classes, 30 who meet the inclusion criteria are purposively selected and randomly divided into two experimental and control groups (15 students each).

Main outcome variables
Education, cognitive problem solving

Scientific title
Problem-solving training on resilience and reducing risky behaviors in students

Public title
Investigating the effect of problem-solving training on resilience and reducing risky behaviors in junior high school students in Rask city in 2026.

Purpose
Education/Guidance

Inclusion/Exclusion criteria
Inclusion criteria:
All first-year high school students in Rask County
Exclusion criteria:
Not being a student and not having studied in junior secondary school

Age
From **13 years** old to **15 years** old

Gender
Both

Phase
N/A

Groups that have been masked
No information

Sample size
Target sample size: **30**

Randomization (investigator's opinion)
Randomized

Randomization description
First, from among all the girls' junior high schools (grades 7, 8, and 9) in Rask County, 3 schools are randomly selected. Then, from each school, one or two classes from grades 7 to 9 are randomly selected as the final clusters. From among the students in these classes, 30 who meet the inclusion criteria are purposively selected and randomly divided into two experimental and control groups (15 students each).

Health conditions studied

1

Description of health condition studied
A study of problem-solving training in female students.

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description
The effect of problem-solving training on students is examined.

Timepoint
The study of the impact of problem-solving training on students will be conducted over a period of 7 days.

Method of measurement
Problem-solving skills training D'Zurilla et al. (1999)

Secondary outcomes

empty

Intervention groups

1

Description
Control group: There are 15 students.
