The effect of intravenous sodium valproate versus dexamethasone on headache relief in patients with acute migraine headache: a double blinded randomized clinical trial

Protocol summary

Summary

Objectives: To investigate the effect of intravenous sodium valproate versus dexamethasone on acute migraine headache Design: Double blinded randomized controlled trial Setting and conduct: Patients who will refer to emergency ward of Beasat and Farshchian hospitals during study period Participants including major eligibility criteria: age of 18 to 65 years; history of having migraine for at least one year; severity of headache equal to or greater than 5 VAS Intervention: A single dose of 400 mg sodium valproate plus 50 mL saline normal solution within 15 min intravenously, versus a single dose of 16 mg dexamethasone plus 50 mL saline normal solution within 15 min intravenously Main outcome measures: Severity of headache using VAS scale will be measured at baseline, one half and two hours later.

Scientific title

The effect of intravenous sodium valproate versus dexamethasone on headache relief in patients with acute migraine headache: a double blinded randomized clinical trial

Public title

The effect of intravenous sodium valproate versus dexamethasone on acute migraine headache

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: Age of 18 to 65 years; history of having migraine for at least one year; severity of headache equal to or greater than 5 VAS

Age

From **18 years** old to **65 years** old

Gender

Both

Phase

3

Groups that have been masked

No information

Sample size

Target sample size: **72**

Randomization (investigator's opinion)

Randomized

Health conditions studied

1

Description of health condition studied

Acute migraine headache

ICD-10 code

G43

ICD-10 code description

Migraine with or without aura

Primary outcomes

1

Description

Severity of headache

Timepoint

At baseline and then 0.5 hour and 2 hours later

Method of measurement

Visual Analogue Scale (VAS)

Secondary outcomes

1

Description

Any side effect such as allergy

Timepoint

0.5 hour and 2 hours later

Method of measurement

Questionnaire

Intervention groups

1

Description

Intervention 1: A single dose of 400 mg sodium valproate plus 50 mL saline normal solution within 15 min intravenously.

Category

Treatment - Drugs

2

Description

Intervention 2: A single dose of 16 mg dexamethasone plus 50 mL saline normal solution within 15 min intravenously.

Category

Treatment - Drugs
