Comparison of the effect of treatment with HCG and recombinant human FSH versus not treatment on improvement of semen parameters in infertile men after surgical repair of varicocele: a randomized clinical trial

Protocol summary

Summary

Objectives: To compare the effect of treatment with HCG and recombinant human FSH on improvement of semen parameters in infertile men after surgical repair of varicocele. Design: A randomized clinical trial. Setting and conduct: All infertile males who will refer to infertility clinics of Hamadan City during 2012 and 2013.

Participants including major eligibility criteria: The inclusion criteria are: (a) having unilateral or bilateral palpable varicocele; (b) history of infertility for at least one-year; (c) having healthy wife; having abnormal spermogram. The exclusion criteria are: (a) having no testis in scrotum; (b) having acute urogenital infection; (c) medical history of abnormal function of testis such as: trauma, torsion, cryptorchidism, vas deferens obstruction, abnormal karyotype, diabetes, chemotherapy, any history of surgical treatment on testis, scrotum or pituitary gland; (d) contraindication of FSH such as high level of FSH in serum or uncontrolled dysfunction of thyroid or adrenal glands; (e) BMI > 40; (f) substance abuse such as alcohol, narcotics, or anabolic steroids; (g) testis smaller than 4 mL in ultrasonography; (h) azoospermia (no spermatozoid); (i) using gonadotropin. Intervention: The intervention group will be undergone varicocelectomy and then will receive 75 IU recombinant human FSH subcutaneously three times a week and 5000 IU HCG intramuscularly once a week for three months. The control group will be undergone varicocelectomy only. Main outcome measures: The outcome of interest is improvement of the semen parameters including concentration (10⁶/mm²), motility (%), and morphology (%) of spermatozoid after three months as well as the increase in the rate of pregnancy and decrease in the duration of waiting time for pregnancy after one year.

General information

Acronym

HCG: Human Chorionic Gonadotropin FSH: Follicle Stimulating Hormone

Health conditions studied**1****Description of health condition studied**

Male infertility due to varicocele

ICD-10 code

N46

ICD-10 code description

Male infertility

Primary outcomes**1****Description**

The outcome of interest is improvement of the semen parameters including concentration (106/mm²), motility (%), and morphology (%) of spermatozoid.

Timepoint

Three months

Method of measurement

Laboratory tests

Secondary outcomes**1****Description**

The secondary outcome of interest is the increase in the rate of pregnancy and decrease in the duration of waiting time for pregnancy.

Timepoint

One year

Method of measurement

History taking

Intervention groups**1****Description**

The intervention group will be undergone varicocelelectomy and then will receive 75 IU recombinant human FSH subcutaneously three times a week and 5000 IU HCG intramuscularly once a week for three months.

Category

Treatment - Drugs

2

Description

The control group will be undergone varicocelelectomy only without hormone therapy.
