Effect of local injection of botulinum toxin versus nasal fluticasone spray on clinical sign and symptoms in patients with allergic rhinitis: a triple blind randomized clinical trial

Protocol summary

Summary

Objectives: To assess the effect of local injection of botulinum toxin versus nasal fluticasone spray on clinical sign and symptoms in patients with allergic rhinitis.

Design: A triple blind randomized clinical trial. Setting and conduct: The eligible patients with allergic rhinitis who will refer to Besat Hospital during the study period will be enrolled into the trial. Inclusion criteria: (a) age of 18 to 70 years; (b) having allergic rhinitis. Exclusion criteria: (a) pregnancy or breastfeeding; (b) contraindication of corticosteroids; (c) having severe anatomical abnormality in nose or acute rinosinusitis; (d) having glaucoma or prostatic hypertrophy; (e) having severe systemic diseases such as diabetes or asthma; (f) simultaneous using aminoglycoside drugs. Intervention group: Single dose injection of 50 unit Dysport dissolved in 0.1 ml normal saline in the frontal head of the inferior nasal turbinate in either side plus normal saline spray two puffs every 12 hours in either side of the nose for 8 weeks. Control group: Single dose injection of 0.1 ml normal saline in the frontal head of the inferior nasal turbinate in either side plus normal saline spray two puffs every 12 hours in either side of the nose for 8 weeks. Primary outcome: (a) assessing nasal congestion 8 weeks after intervention through physical examination; (b) assessing rhinorrhea 8 weeks after intervention through taking history; (c) assessing nasal itching 8 weeks after intervention through taking history; (b) assessing sneezing 8 weeks after intervention through taking history. Secondary outcome: Assessing dizziness 8 weeks after intervention through taking history.

Scientific title

Effect of local injection of botulinum toxin versus nasal fluticasone spray on clinical sign and symptoms in patients with allergic rhinitis: a triple blind randomized clinical trial

Public title

Effect of local injection of botulinum toxin versus nasal fluticasone spray on clinical sign and symptoms in patients with allergic rhinitis

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: (a) age of 18 to 70 years; (b) having allergic rhinitis. Exclusion criteria: (a) pregnancy or breastfeeding; (b) contraindication of corticosteroids; (c) having severe anatomical abnormality in nose or acute rhinosinusitis; (d) having glaucoma or prostatic hypertrophy; (e) having severe systemic diseases such as diabetes or asthma; (f) simultaneous using aminoglycoside drugs.

Age

From **8 years** old to **70 years** old

Gender

Both

Phase

2

Groups that have been masked

No information

Sample size

Target sample size: **74**

Randomization (investigator's opinion)

Randomized

Randomization description

Blinding (investigator's opinion)

Triple blinded

Blinding description

Placebo

Used

Assignment

Parallel

Other design features

Randomization: The patients will be randomly assigned to intervention and control groups using block randomization of 4 group. Blinding: Patients will be unaware of the type of intervention. The physician who will examine the patients will not be aware of the intervention. The analyzer will be unaware of the type of interventions. Therefore, the trial will be run as triple blind.

Health conditions studied

1

Description of health condition studied

Allergic rhinitis

ICD-10 code

J30.4

ICD-10 code description

Allergic rhinitis, unspecified

Primary outcomes

1

Description

assessing nasal congestion

Timepoint

8 weeks after intervention

Method of measurement

through physical examination

2

Description

assessing rhinorrhea

Timepoint

8 weeks after intervention

Method of measurement

through taking history

3

Description

assessing nasal itching

Timepoint

8 weeks after intervention

Method of measurement

through taking history

4

Description

assessing sneezing

Timepoint

8 weeks after intervention

Method of measurement

through taking history

Secondary outcomes

1

Description

Assessing dizziness

Timepoint

8 weeks after intervention

Method of measurement

through taking history

Intervention groups

1

Description

Single dose injection of 50 unit Dysport dissolved in 0.1 ml normal saline in the frontal head of the inferior nasal turbinate in either side plus normal saline spray two puffs every 12 hours in either side of the nose for 8 weeks.

Category

Treatment - Drugs

2

Description

Single dose injection of 0.1 ml normal saline in the frontal head of the inferior nasal turbinate in either side plus normal saline spray two puffs every 12 hours in either side of the nose for 8 weeks.

Category

Placebo
