The effect of family-oriented care versus no care on quality of life in children with cancer: a randomized clinical trial

Protocol summary

Summary

Objectives: To assess the effect of family-oriented care versus no care on quality of life in children with cancer.
Design: a randomized clinical trial. **Setting and conduct:** The eligible children with cancer who may hospitalized in Besat Hospital during the study period will be enrolled into the trial. **Inclusion criteria:** age of 2 to 15 years; having cancer; at least one month past from the diagnosis of the cancer; receiving at least two courses of chemotherapy. **Exclusion criteria:** Physical or mental disorder; absence from educational sessions more than one session. **Intervention group:** Routine treatment plus educational session of family-oriented care 40 minutes sessions daily for 4 days. **Control group:** Just routine treatment. **Primary outcome:** Assessing the quality of life before intervention and one month after that using standard questionnaire. **Randomization:** The patients will be randomly assigned to intervention and control groups using block randomization. **Blinding:** Not possible.
