Effect of acupuncture effects on post-operational pain relief in recovery stage in patients who are candidate for open cholecystectomy: a randomized clinical trial

Protocol summary

Summary

Objectives: To assess the effect of effects on post-operational pain relief in recovery stage in patients candidate for open cholecystectomy. Design: A randomized clinical trial. Setting and conduct: The eligible patients who patients who are candidate for open cholecystectomy and will refer to Besat Hospital during the study period will be enrolled into the trial. Inclusion criteria: Age of 18 to 70 years; Indication of open cholecystectomy. Exclusion criteria: A history of chronic pain; psychological disorders; neurosensory disorders; sensitivity to jewelry. Intervention group: Routine treatment plus puncture of LV3 and LI4 points with stainless-steel needle 15*25 for 20 minutes. Control group: Just routine treatment. Primary outcome: Assessing post operational pain 1 and 6 hours after intervention using Visual Analog Scale (VAS). Randomization: Random assignment of the patients to the intervention and control groups through drawing of lots. Blinding: Not possible.
