Evaluation of Parafunctional Habitual Deletion in Improvement of Patient with Temporomandibular Joint Disorder and Neck Pain

Protocol summary

Summary

This study aimed to assess the efficacy of elimination of oral parafunctional habits for improvement of TMDs and neck pain. This interventional study was conducted on 136 patients presenting to the oral medicine department from January 2012 to January 2014 who had TMD, parafunctional habits and neck pain according to the Helkimo's index and the neck pain and disability index (NPDI). Patients were instructed on how to quit their parafunctional habits and were followed up at one and two months.

Health conditions studied

1

Description of health condition studied

TMD, Neck pain

ICD-10 code

K07.6, S14

ICD-10 code description

Temporomandibular joint disorders, Injury of cervical sympathetic nerves

Primary outcomes

1

Description

TMD

Timepoint

at the time of intervention,,1months after intervention...and 2months after intervention

Method of measurement

Helkimo index

Secondary outcomes

1

Description

Neck pain

Timepoint

at the time of intervention,,1month after intervention...and 2months after intervention

Method of measurement

NPDI index

Intervention groups

1

Description

Patients were instructed to place their tongue behind their maxillary central incisors in such a way that the tongue applied no pressure to oral and dental tissues (as when the letter N is pronounced). In this position, the distance between the upper and lower teeth must be a few millimeters and lips must be closed with minimal pressure. In this position, the freeway space is maintained.
