Efficacy of short term prescription of nicorandil on in-hospital outcomes of patients who admitted because of acute coronary syndrome without ST elevation

Protocol summary

Summary

In order to consider the efficacy of Nicorandil addition to common treatments, 252 patients are chosen among the patients suffering from acute coronary syndrome without ST elevation, who are admitted in Heart Center. Firstly, all of them are put in heart monitoring for 48 hours. Then, they are divided in two groups randomly. One group is treated by the common treatments like anti-thrombotic, anti-platelet and painkiller. Another group is put in Nicorandil in addition to these treatments. In the patients' primary ECG, Myocardial Infarction with ST elevation or Left Bundle Branch Block should not be seen. These patients are visited during hospitalization daily by researcher. Both researcher and patients are not aware of prescription. There are the response criteria to treatment, which are recorded, including the number of chest pain episode, arrhythmia, the echocardiography characters, the amount of increasing in myocardial enzymes as well as the number of hospitalization days. The results are recorded in special forms and considered by a statistics expert.

Scientific title

Efficacy of short term prescription of nicorandil on in-hospital outcomes of patients who admitted because of acute coronary syndrome without ST elevation

Public title

Efficacy of nicorandil in acute coronary syndrome

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criterion: Non ST elevation acute coronary syndrome. Exclusion criteria: myocardial infarction with

ST levation and Left Bundle Branch Block

Age

No age limit

Gender

Both

Phase

2

Groups that have been masked

No information

Sample size

Target sample size: 252

Randomization (investigator's opinion)

Randomized

Health conditions studied

1

Description of health condition studied

Acute coronary syndrome

ICD-10 code

I20_I25

ICD-10 code description

Ischaemic heart disease

Primary outcomes

1

Description

Response treatment

Timepoint

During hospitalization daily

Method of measurement

Physician visit

Secondary outcomes

1

Description

Clinical side effect

Timepoint

During hospitalization daily

Method of measurement

Physician visit

Intervention groups

1

Description

Interventional group: Oral Nicorandil is started at first day of admission 20 mg BID in addition to common treatment,then continued during hospitalization until last day.

Category

Treatment - Drugs

2

Description

Control group:identical to that of common treatment including antithrombotic,antiplatelet and analgesics.

Category

Treatment - Drugs
