A clinical trial for comparison of reducing conduct disorder symptoms by spiritual psychotherapy package in adolescents with conduct disorder

Protocol summary

Summary

This study is conducted to design an interventional package of spiritual psychotherapy for adolescents with conduct disorder, and investigating its validity and effectiveness and its implementation in a randomized clinical trial with a control group . In the first step , spiritual psychotherapy package is designed for adolescents with conduct disorder and its face and content validity is assessed . Then a preliminary study for 6 adolescents with conduct disorder is performed. In the second step, clinical trial is administered in the reformation and training center, so 60 adolescents aged 12 to 17 years that received conduct disorder diagnosis based on DSM-IV diagnostic criteria, are randomly assigned to the experimental or the control group and spiritual psychotherapy package is performed in 20 one-hour group sessions , two sessions per week , for the experimental group . the K-SADS-PL questionnaire is completed in both experimental and control groups in before and after intervention and 6 month after it, and findings is compared in these 3 stages between both groups.
