Iranian Registry of Clinical Trials

29 Jul 2026

A placebo-controlled double-blind randomized trial of itraconazole for Allergic Fungal Sinusitis

Protocol summary

Summary

The purpose of this randomized double- blind controlled study is to determine the efficacy of itraconazole in the treatment of patients with Allergic Fungal Sinusitis (AFS). These patients, after endoscopic sinus surgery and routine therapy consisting of prednisolone (1mg/kg body weight for a period of ten days), nasal spray corticosteroid and Amphotericin (100 mg/ml) in distilled water for nasal irrigation will be divided in two groups. The control group will receive placebo and intervention group Itraconazole (200 mg daily) for two months after surgery. Patients with a history of prior sinus surgery, systemic disease, pregnant or lactating women are excluded from this study. A total of 36 patients between 15 and 65 years old who suffer from AFS in Khuzestan will be enrolled. At the end of the 3rd month diagnostic nasal endoscopy and CT scan will be done and the patients will fill a questionnaire of quality of life (Snot 20).

General information

Acronym

Allergic Fungal Sinusitis (AFS)

IRCT registration information

IRCT registration number: **IRCT201204049375N1**

Registration date: **2013-04-09, 1392/01/20**

Registration timing: **registered_while_recruiting**

Last update:

Scientific title

A placebo-controlled double-blind randomized trial of itraconazole for Allergic Fungal Sinusitis

Public title

The effect of itraconazole in the treatment of allergic fungal sinusitis

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: patients with diagnosis of allergic fungal sinusitis based on culture and pathology.

Exclusion criteria: history of previous sinus surgery, history of systemic disease, pregnant or nursing mother, patient who display rising of hepatic enzymes during treatment with itraconazole.

Age

From **15 years** old to **65 years** old

Gender

Both

Phase

2

Groups that have been masked

No information

Sample size

Target sample size: **36**

Health conditions studied

1

Description of health condition studied

fungal sinusitis

ICD-10 code

J32

ICD-10 code description

chronic sinusitis

Primary outcomes

1

Description

Therapeutic effect of Itraconazol on fungal sinusitis

Timepoint

three months after intervention

Method of measurement

Endoscopic and CT scan findings

Secondary outcomes

1

Description

quality of life

Timepoint

three months after intervention

Method of measurement

Snot-20 questionnaire

Intervention groups

1

Description

Intervention: Prednisolone 1mg/kg for 10 days followed by nasal corticosteroid and topical irrigation with amphotericin plus itraconazole 200 mg daily for two months

Category

Treatment - Drugs

2

Description

Control group: Prednisolone 1 mg/kg for 10 days followed by nasal corticosteroid and topical irrigation with amphotericin plus placebo daily for two months

Category

Treatment - Drugs
