Effect of Applying Cooling Gel Pad Compared with not using it on reducing the pain of sternal incision associated with deep breathing and coughing in cardiac surgery patient

Protocol summary

Summary

This study is a randomized Crossover trial which was performed to assess the impact of Applying Cooling Gel Pad on the pain of sternal incision associated with deep breathing and coughing in cardiac surgery patient. For this purpose, 50 eligible (more than 21 years age, patients scheduled to undergo Coronary artery bypass graft surgery and oriented) and consenting patients were recruited and randomly allocated to intervention and control group on post-surgical first day. All Patients performed four episodes of deep breathing and coughing (two with the cooling gel pack and two without cooling gel pack), every two hours. In the intervention group intensity and quality of pain, Saturation percentage Oxygen arterial blood, blood pressure and heart rate were measured before and after intervention and in the control group above measurements have done before and after deep breathing and coughing. The level of anxiety in both group were measured and compared. At the end of the fourth session, all patients were asked to describe their sensations with the cooling gel pack and their preferences for the gel pack application prior to deep breathing and coughing.

Scientific title

Effect of Applying Cooling Gel Pad Compared with not using it on reducing the pain of sternal incision associated with deep breathing and coughing in cardiac surgery patient

Public title

Effect of Applying Cooling Gel Pad on the pain of sternal incision associated with deep breathing and coughing.

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion criteria: more than 21 years age; able to speak and understand Persian; The minimum literacy of Reading and writing; Willing to give written informed consent; male or female patients scheduled to undergo Coronary artery bypass graft surgery with or without a valve replacement using a median sternotomy. Exclusion criteria: Mechanically ventilated patients; diseases that affect pain measurement (Delirium; Dementia or Major depression; Severe visual, hearing and verbal impairment; diabetic patient) contradictions to cryotherapy use such as (Reynaud's disease; cryoglobulinemia; sickle cell anemia; cold allergic conditions and in areas with impaired sensation); bilateral mammary harvest; postoperative complications such as (infection; bleeding; uncontrolled Atrial fibrillation or wound dehiscence).

Age

From **21 years** old to **75 years** old

Health conditions studied

1

Description of health condition studied

Coronary artery disease

ICD-10 code

I20-I25

ICD-10 code description

Chronic ischaemic heart disease, unspecified

Primary outcomes

1

Description

Intensity of pain

Timepoint

Immediately before the application of cooling gel pack and after termination of DB & C sessions in intervention group and Immediately before and after DB & C sessions in control group.

Method of measurement

numeric rating scale (NRS)

Secondary outcomes

1

Description

Anxiety

Timepoint

At the beginning application of cooling gel pack and before deep breathing and coughing.

Method of measurement

State -Trait Anxiety Inventory

2

Description

Quality of pain

Timepoint

Immediately before the application of cooling gel pack and after termination of DB & C sessions in intervention group and Immediately before and after DB & C sessions in control group

Method of measurement

Modified short form MacGill pain Questionnaire

3

Description

blood pressure and heart rate

Timepoint

Immediately before the application of cooling gel pack and after termination of DB & C sessions in intervention group and Immediately before and after DB & C sessions in control group.

Method of measurement

Cardiac monitoring machine

4

Description

Spo2

Timepoint

Immediately before the application of cooling gel pack and after termination of DB & C sessions in intervention group and Immediately before and after DB & C sessions in control group.

Method of measurement

Pulse Oxy-meter

Intervention groups

1

Description

Intervention group: application of cooling gel pack before deep breathing and coughing sessions.

Category

Other

2

Description

Control group: deep breathing and coughing sessions without application of cooling gel pack

Category
