Therapeutic effects of Montelukast and Fluticasone in children under 5 years with recurrent wheeze

Protocol summary

Summary

The purpose of this study is to investigate the effect of Fluticasone and Montelukast in recurrent wheeze, ie more than three times a year in children under 5 years. The total sample size is 68 children and sampled centers are Tabriz Children's hospital and Golgasht clinic and children will be randomly divided into two groups. For 34 children will be administered Montelukast tablet 5 mg daily till one month after the baseline visit and for 34 children Fluticasone spray 100 mcg 2 puffs twice a day for 1 month and adjust the dose will be done after one month visit. We visit the child every month for 6 months, and outcomes are assessed based on clinical examination, including coughing, wheezing and shortness of breath .This study is designed for a year. Before starting treatment, inclusion and exclusion criteria are assessed by questionnaire and consent form from parents is completed. Inclusion criteria: children under 5 years, with more than 3 times the number of wheezing in clinical studies and no clinical evidence of other predisposing factors. Exclusion criteria: children under 5 years who have evidence of other predisposing factors for wheezing, such as Gastro Esophageal Reflux Disease, Cystic Fibrosis, heart disease, airway disease, congenital anatomical issues.
